NEW INNOVATION!

STEFAN DESIGN is proud to
introduce the first ever produced
COLORED TEALIGHT CANDLE HOLDERS

A Tealight Candle Holder which hardly can be distinguished
from a real wax candle.

“We love the warm light and cosy flickering of real wax candles”

We light candles every day. On cold rainy days, in winter, but also on beautiful summer evenings on our terrace. Unfortunately we experience quite often that burning candles also leave traces of wax, which are very difficult to remove.

In addition, you never burn them completely and they lose their decorative appearance as well. They also melt and deform on warm and sultry summer evenings.

That's why we started our search for the perfect solution. We discovered Tealight Candle Holders, which burn by means of small and big tealights. These candle holders are made of Polymer and are produced in Germany. They are ideal for in and outdoor use. You simply insert the small or big tealight, light them up and they burn and flicker like real wax candles, without the disadvantages of flowing and dripping wax or deformation of real wax candles.

We are proud to announce that we can offer you, beside black and white, 5 newly developed colors. Interested in our Farluce trend collection? Do you want to experience the warm and cosy flickering light and advantages of our Tealight Candle Holders?

Then please contact us on: stefan@stefan-design.nl
